
ENTRY POINTS
cli.py
calrcpsp
info, solve, validate, reschedule
scripts/
run_benchmark.py
make_figures.py: benchmark runs and paper figures
public API
public API
calrcpsp package
PROBLEM INPUT
instance.py
load_instance()
Parse CA-RCPSP JSON; check graph is acyclic
assignment.py
assign_resources()
Skill matching, balanced or coverage strategy
calendar.py
WorkCalendar
Shifts, breaks, holidays; W(t), W⁻¹(w), occupancy
MAX-PLUS CORE
maxplus.py
closure()
Precedence/resource matrices; earliest and latest starts
scheduler.py
solve()
Solve in work time, then map to calendar time
re-solve
RESULTS AND REPAIR
metrics.py
validate_schedule()
Compliance, conflicts, resource utilisation
schedule.py
Schedule
Start times, makespan, slack, critical path, to_json()
reschedule.py
reschedule()
Target a disruption, and re-solve in full
Data flow
Call through public API
Core Max-Plus modules
